CREATION RECORD / 26 OCTOBER 2026

Myra Veyra

New fictional identity - master portrait and multi-view reference

Record requested by: Rahul Kumar
Recorded in: ChatGPT
Record date: 26 October 2026 (Asia/Kolkata)

This document records the new fictional character created in this conversation after the decision to stop using a real-person photograph as the identity reference. It documents the visible generation workflow and the resulting files; it is not a copyright registration, legal clearance, model release, or independent timestamp certificate.

Character profile

Fictional Indian female fashion influencer, age 24; medium warm brown skin; dark brown eyes; long dark hair with a gentle natural wave; average build; intended height impression of 5 feet 3 inches (approximately 160 cm). Calm, confident and approachable. The close-up portrait does not establish physical height.

Approved identity assets

The new master portrait was generated from text alone. No uploaded photograph or earlier image was supplied as a reference in that call. The six-view sheet used only this new fictional master portrait as its image reference.

Sheet views: left-facing profile, front, right-facing profile; left-facing three-quarter, back, right-facing three-quarter. All panels are intended to represent one fictional character.

Asset A - New master portrait

Resolution note

The reference-sheet prompt requested 3840 x 2160 pixels. The actual dimensions recorded above are the delivered file dimensions; this record does not label the file as native 4K unless its dimensions meet that request. SHA-256 values identify these exact source files, not the person depicted.

Master portrait prompt

Tool: built-in image generation. Reference image paths: none. Transparent background: false. The following is the generation prompt used for Asset A.

Create a NEW ORIGINAL FICTIONAL adult character master portrait for Myra Veyra, a 24-year-old Indian female fashion influencer. Generate from this text alone, with no reference photograph and no intention to depict any existing real person. Give her a distinctive coherent facial identity: softly rectangular oval face, gently broad cheekbones, rounded chin, dark brown slightly hooded almond eyes, natural softly straight thick eyebrows, medium-width nose with a rounded tip, softly defined cupid's bow and naturally full lower lip. Medium warm brown skin, realistic fine pores, subtle natural facial asymmetry. Long dark brown nearly black hair, simple center part, mostly straight with a gentle natural wave toward ends, open hair tucked behind one ear so facial contours remain visible. Average build, natural petite adult proportions consistent with height 5 feet 3 inches. Plain modest cream crew-neck casual top, tiny silver stud earrings, minimal natural makeup. Calm confident approachable expression with relaxed closed lips. MASTER IDENTITY REFERENCE composition: directly front-facing, level head, no tilt, both eyes looking at camera, shoulders square, entire hair crown visible with generous margin, head and upper torso in vertical 4:5 portrait. Clean light warm-gray seamless background, soft even daylight-balanced studio lighting, clear facial details without dramatic shadows, sharp eyes, accurate natural skin color, premium editorial photography yet relatable. Photorealistic with lifelike hair strands and skin texture. One person only. No text, watermark, logo, heavy makeup, plastic skin, exaggerated beauty filters or fantasy styling. This image establishes a new fictional identity for future consistency.

Documented distinction

Earlier images in this conversation used a real-person reference. This record applies only to the new master portrait and the six-view sheet listed here. It does not reclassify or clear the earlier images.

Future use record

Reference-sheet generation instructions

Asset B was generated with Asset A as its sole image reference. Instructions requested a 3-column by 2-row sheet with matching facial identity, medium warm brown skin, long dark hair, cream top, silver studs and neutral studio lighting. Views requested: left profile, front, right profile, left three-quarter, back and right three-quarter. Requested resolution: 3840 x 2160. This paragraph is a summary of that prompt, not a verbatim transcript.

Identity reference instruction for future content

Use the new Myra Veyra master portrait and/or its six-view sheet as the identity reference. Preserve her facial structure, skin tone, dark brown eyes, nose, lips, eyebrows and hairline. Generate one fictional adult character in the requested scene. Avoid using earlier real-person reference photos or outputs as identity inputs.

What this record supports

It records the workflow shown in this conversation, provides visual references, and identifies the source image bytes with cryptographic hashes. Keep the original source images and this conversation alongside this document.

What this record does not establish

It does not guarantee that nobody resembles the character, that no claim will arise, or that exclusive copyright exists. It does not verify model training data, clear third-party rights, register the character name, or certify ownership under any jurisdiction. The name Myra Veyra has not been searched for trademark conflicts. No independent likeness search or legal review is recorded here.

Suggested public disclosure

"Myra Veyra is a fictional, AI-generated fashion and lifestyle character."

Record integrity

Prepared from the visible conversation and local generated image files. No signature, official seal, registration number, independent creation timestamp or third-party certification is asserted.
